

VisionShare

AD, perfectly paired for display in a true wireless meeting room

As a natural progression from our AC series, the AD models are meticulously designed with a compact form factor, specifically tailored for seamless integration with all displays. The 'D' in AD goes beyond mere displays; it symbolizes a holistic approach to meeting room solutions. The AD series epitomizes the ideal meeting room—interactive, seamless, and secure.

The spaces beneath an AD model are carefully carved out, creating a designated gap for the display frame to seamlessly fit in. Placed effortlessly on top of any display, the AD model completes your meeting room setup.

Inheriting all the advanced features and benefits of the AC series, the AD series boasts proprietary 60GHz technology, True 4K capability, content protection without data compression, hassle-free third-party software installation, and much more.

True plug & play via HDMI & USB-C

Why bother with third-party app installation? Meetings are meant to be short and sweet. Plug in our VisionShare and present within seconds. Lowest maintenance ever.

True4K video quality

We do not cut corners, just like our true 4K resolution does not rely on any scaler shortcut. Did you know other brands compress the presentation like data? We? Never.

Simple & easy installation

The AD series is part of the interior design of your meeting room: clean, seamless and elegant. Impress your customers with a state of the art look and feel as they present.

Secure & versatile protection

VisionShare is compliant with HDCP and DTCP for content protection and secure signal transmission. We also decode content as video frame by frame, hence 100% safe.

Super-fast mmWave 60GHz technology

What problem VisionShare has been solved?
